PROFILE

I am an Urban and Regional Planning graduate developing expertise in GIS, spatial data engineering, remote sensing and geospatial database management. I use QGIS, ArcGIS, Python, GeoPandas, SQL/PostGIS, DBeaver and WebGIS to support spatial data production, analysis and decision-making. I combine planning and regulatory knowledge with data analytics and software technologies.

EXPERIENCE

September 2026 – Present | ANKAGEO Spatial Information Technologies

Spatial data production and digitisation, LiDAR point-cloud segmentation, and GIS record inspection, querying and organisation with SQL and DBeaver.

July 2025 – August 2026 | ORALL Urban Planning and Architecture Office

Development-plan and revision reviews, planning regulations, technical reporting and consultancy support.

2024 | Çekmeköy Municipality

Mandatory summer internship in urban planning.

TECHNICAL SKILLS

GIS and remote sensing

QGIS, ArcGIS, Google Earth Engine, GeoPandas, LiDAR

Data and programming

Python, SQL, PostgreSQL/PostGIS, DBeaver, FastAPI

WebGIS and infrastructure

WebGIS, GitHub, Docker, Render, Vercel

Planning and design

Netcad, AutoCAD, CityEngine, SketchUp, Blender, SPSS, Excel

AREAS OF EXPERTISE

Urban planning and regulations

Development-plan amendments, land-use decisions, institutional opinions, property considerations, technical reporting and consultancy.

Spatial data production and LiDAR

Data inventory, photogrammetric production, point-cloud processing and segmentation in road-related data projects.

GIS database management

SQL queries for point records, DBeaver-based review, filtering, schema organisation and data control.

Statistics and mobility WebGIS

Developing regression, correlation and projection-based transport analyses and scenarios with web-map visualisation.

Remote sensing and decision support

Wind and solar site suitability, multi-criteria analysis, water-sensitive development, urban heat islands and heat exposure.

PROJECTS AND RESEARCH

TÜBİTAK 2209-A

Project lead. Transportation-oriented urban heat island effects and mitigation strategies.

WebGIS applications

Web mapping and analysis systems built with GitHub, Docker, FastAPI, PostGIS, Render and Vercel.

Planning and transport

Development-plan revisions; minibus and service routes; conservation and permitting; 1:5,000 and 1:1,000 plan analyses.

TÜBİTAK 2205 BİDEB

Urban planning research focused on gender equality and disadvantaged groups.

CERTIFICATIONS

Netcad (2023) • Archify İzmir (2024) • Climathon (2025) • Boğaziçi Enstitüsü AR-GE Projeleri (2026) • Good Design İzmir / ÜTAS (2025) • Temel QGIS (2026) • Python for Geospatial (2026)

ANKAGEO | EXPERIENCE & TECHNICAL COMPETENCIES

ANKAGEO Spatial Information Technologies Software Company • September 2026 – Present

Job title: Data Management and Digitization

I contribute to spatial data production, digitisation, LiDAR point-cloud processing and GIS database quality control. In data production workflows associated with Türkiye's General Directorate of Highways, I am gaining experience in segmenting 3D spatial data and reviewing digitised database records.

Spatial data production and digitisation

Contributing to geospatial data inventories, feature production from photogrammetric sources and road-related spatial digitisation workflows.

LiDAR point-cloud processing and segmentation

Working with 3D LiDAR point clouds to segment point clusters, distinguish spatial features by geometric properties and extract meaningful geospatial information.

GIS database queries and quality control

Using SQL to identify point records created through user digitisation; inspecting and filtering records in DBeaver and reviewing data consistency.

Database schemas and data organisation

Supporting clearer organisation of database tables and schemas, systematic record monitoring and improved spatial data management.

Tools and working methods

SQL, DBeaver, GIS-based data management environments, LiDAR point-cloud data and digitisation workflows.

ORALL | PROFESSIONAL PROJECTS

July 2025 – August 2026 • Urban planning, transportation, permitting and technical consultancy

01 — Impound Lot Planning and Permit Process | Buca, Izmir

Reviewed cadastral parcels, ownership records and existing development-plan decisions for an impound lot. Assessed road access and road dedication; researched required consent and licensing procedures and contributed to evaluating the use from a planning perspective.

02 — Minibus Route Planning and Road-Use Rights Request

Reviewed the existing transport network and routes for a minibus road-use rights request, assessed relevant road connections and contributed to developing a proposed minibus route.

03 — Additional Service Route Request | Selcuk, Izmir

Reviewed the existing transport structure and road network, assessed the service route and helped prepare a proposed route to support an additional service-line request.

04 — Development Plan Revision and Technical Consultancy

Reviewed an existing development plan and identified errors, omissions and inconsistencies in plan decisions and technical representations. Helped assess and check proposed revisions and prepare a technical planning consultancy report.

05 — Listed Building Restoration, Conservation and Permits

Reviewed the conservation status and planning conditions of a listed building in a conservation area; assessed the approvals required for restoration and contributed to the related planning work.
